Ref: Reference for Michael Notter's workshop "Neuroimaging in Python"

To whom it may concern,

Michael Notter taught a 2-day workshop "Neuroimaging In Python" at the MRC Cognition and Brain Sciences Unit, University of Cambridge, on 6 and 7 September 2018. The workshop was attended by about 40 PhD students and post-doctoral researchers from the Cambridge cognitive neuroscience community. It was locally organised by Dr. Olaf Hauk and Dr. Johan Carlin. Michael impressed us with his well-organised and highly professional teaching materials (Jupyter Notebooks and Docker), and the breadth and depth of his knowledge on neuroimaging analysis. He covered several areas of MRI and fMRI data analysis, introducing basic concepts as well as state-of-the-art methods. We collected formal feedback from our participants, and most of them rated the workshop as exciting and highly relevant to their work. We would definitely invite Michael for this workshop again if we had funds available.

Yours sincerely,

Olaf Hauk
